DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 24-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Pletscher (Swiss Patent 119,033).
3. Pletscher discloses a tube (1) that has a wandering helical path (see Figures 1, 3 and 5).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 14-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Trott (US Patent 4,646,738) in view of Pletscher ('033).

Art Unit: 3731

6. Trott discloses an instrument (10) comprising an outer tube (12) with an opening (18) and an inner tube (40) having a rigid proximal region (44), a distal region (42) and a flexible transmission region (22). However, Trott does not disclose the transmission region having a helical slit that has a meandering path. Pletscher teaches of a flexible transmission member (1) that has a meandering helical path for the purpose of better transferring power in the analogous art of powered devices. See column 1, lines 1-10. It would have been within the level of skill in the art at the time of the invention to have modified the transmission member (22) of Trott, as taught by Pletscher, in order to have transferred power in a better manner.
